

**INTERNATIONAL
EDUCATIONAL CAMPAIGN**

WIND EXPERTS

**Through
education
we sustain
the future**

OW
OCEAN WINDS

WHAT IS WIND EXPERTS?

Ocean Winds, as part of its commitment to social investment with younger generations, has created the **International Educational Campaign Wind Experts** that **was made with the aim of raising awareness about the problem of climate change and to publicise effective solutions** to lessen its effects and combat it.

The challenge of acting on climate change

Climate change is an obvious fact with harmful consequences for the environment and for people. We are at a **key moment to stop** it and start **searching for alternatives** more suitable for preserving the health of the planet.

Offshore wind energy: a clean future beyond the shore

Thanks to this initiative, the participating children will enter the world of **renewable energy**, learning about new and innovative ways of generating energy in an environmentally friendly way and, in particular, getting to look closely at **offshore wind energy**.

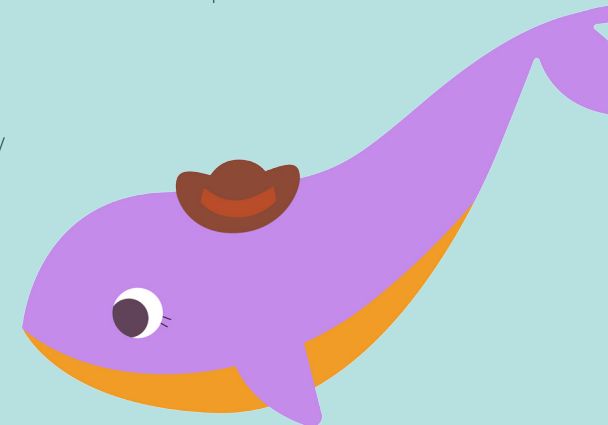

The campaign takes place in schools in three countries: Spain, the United Kingdom and Poland.

EDUCATING IN A FUN WAY

During the Winds Experts International Educational Campaign, children will take **two interesting educational sessions** in which they will be guided by a specialist environmental educator who will present the theme in a very playful way.

The children, together with their teachers, will be able to learn about energy and different types of energy sources, as well as renewable energies. For this, they will have interactive educational material specially designed for children of their age.

INTERNATIONAL COMPETITION "WIND EXPERTS"

Participating children, and their teachers, will have the opportunity to participate in an **international educational competition** organised among all registered centres in the three participating countries: Spain, the United Kingdom and Poland.

They will apply everything they have learned and test their imagination to build, with reused materials, a model of an offshore wind turbine.

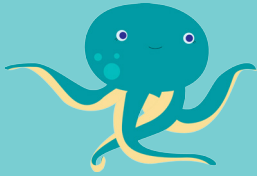

The best wind turbines will win fabulous prizes!

Are we looking at future engineers who will work together to achieve a healthier planet?

UNITED TO CURB GLOBAL WARMING

Action is urgent and it is a matter for all of us; only in this way will real change be achieved and that is why **education** based on environmental values at both home and school is necessary.

**Do you want to start right now?
Take note of these simple tips for the whole family!**

- 1. Do not waste energy and turn off anything that is not being used.**
- 2. Save water, use only as much water as you need.**
- 3. Get around by bike or on foot whenever you can.**
- 4. Use more public transport, avoiding using one vehicle per person, it pollutes too much!**
- 5. Buy only those things that are really necessary. Everything you need uses up natural resources!**
- 6. Reuse as much as you can to avoid buying new things.**
- 7. Recycle, in order to give a new life to the materials and avoid extracting them again from the earth.**
- 8. Take care of the environment; plants, animals, water... because you are part of it. Everything must be connected to work well.**

**SMALL GESTURES ARE THE KEY
TO THE FUTURE WE DREAM OF!**
